In mid-August the P'yŏngyang radio station was under a hill approximately 42 feet high at YD-386238, with its entrance at the western end of the hill. A street car track crossed the hill from north to south. Civilian traffic was prohibited from entering the area around the western base of the hill. Two antenna poles were set among a dense growth of trees about 25 yards from the entrance to the station. About 3 feet of each pole was visible above the trees.
